

WHAT IS CLAIMED IS:

1. A disk player comprising;

a main chassis for enclosing play means for playing a disk;

a receiving module having a slot in which the disk is to be inserted;

disk transfer means for transferring the disk inserted into said slot;

disk detecting means for detecting a position of the disk inserted; and

drive means for moving said receiving module between a closed position and an opened position spaced from said closed position,

wherein the disk player further comprises switch means controlled by user for issuing a drive starting command signal to start driving said drive means, wherein said disk detecting means generates a detection signal when said disk arrives at a predetermined position, and wherein said drive means moves said receiving module from said opened position to said closed position in response to one of the detection signal from said disk detecting means and the command signal from said switch means.

2. A disk player according to Claim 1, wherein said slot is exposed to an exterior of said main chassis when in said opened position and accommodated in said main chassis when in said closed position.

3. A disk player according to Claim 1, wherein said

is started in response to said insertion detecting signal.
